User Stories + MoSCoW + Points - Stories

As a (**User**)	I want (**Goal**)	so that (**Reason**)
As a human	I want a second opinion on what to eat	so I can make up my mind and eat already
As a busy human	I want the food to be delivered to wherever I am	so I can eat while being productive
As a crappy host	I want to take my friends out somewhere new to eat	so I won't eat forever alone
As a user	I want to this service to be portable	because I will continue to be hungry and indecisive whether I upgrade my phone or drop it in the toilet
As a practicing vegetarian/kosher/halal/chronically allergic eater	I want a second opinion on what to eat to consider my preferences	so I can abide by my beliefs and/or not experience anaphylaxis
As a developer	I want there to be a high degree of unit test coverage	so that errors are sparse and easy to fix
As a developer	I want this service to be easily ported to other devices	so that my job is easier
As a developer	I want different aspects of the program to abstract away implementation details that may not have anything to do with the other aspects	so that the code is understandable, organized, maintainable, and extensible
As a developer	I want extensive documentation	so that everyone knows what the code does
As a developer	I want to understand the tools being used	so I know what functionality already exists versus what I need to implement on my own
